## Seep Gulati

*Junior Developer in the making.*  
<PR> to </DEV>

After several years of promoting companies as a *Public Relations professional*, I decided to change my path and get into something even more exciting. I'm currently learning and exploring 'Coding' at Coder Academy.

### About Me

#### Q. What light's you up?

Books which share new perspectives, good food and interesting conversations with people on things they are passionate about.

#### Q. What is the coolest thing you have accomplished?

I've struck a few cool things from my bucket list, some of them are as follows:

- Lol, Happy dance in Coder Academy elevator.
- Three postgraduate diplomas in different subjects in a year, so practically doing studies for breakfast, lunch and dinner.
- Cheering-up strangers on the street.

#### Q. What are you a product of?

Facing fears: each year, I work on things which scare me the most and try to reach a middle ground.

#### Q. What's important about you that isn't on your resume?

Growth mindset: I can genuinely say, whatever I have accomplished in life is due to having a mindset that our potential is infinite. We can achieve anything with hard work and sincere effort. *"The harder, we work, the luckier we get."*

## About Page

- My bio-page
- This page renders in reader-mode in Safari, allowing the user to save it as pdf or read it without internet.

# Functionality

- Animation to showcase logo.
- Single page application. Bottom navigation bar with hover effect.
- Three tabs: About, Skills and Contact.
- When the user clicks those tabs, the screen doesn't load each time, giving you a mobile app experience.
- Hyperlinked icons on skills and contact page open a new tab for relevant links.
- Form embedded on the 'Email' icon on the contact page opens a new view, allowing the user to send me emails.

# Learnings

- Plan every step thoroughly, before starting coding.
- Planning needs to be revisited daily to match the pace of the project.
- Documentation should be finished after a series of deployment testing.
- During the trial and error process, one thing might work, and another element might disappear, try not to PANIC (which is very hard).
